

Conference : Trustworthy AI: A Concept or a Necessity?

Duration: 1 hour

Audience: Dirigeant et cadre|Professionnel TI

Summary

Trustworthy AI is not just a concept, it is a strategic and ethical necessity. It is built on transparency, security, compliance, accountability, and inclusion, with both technical challenges (bias, explainability, interpretability, and robustness) and societal ones (acceptability, governance).

Marie-Pierre Habas-Gerard holds a PhD in Quantum Physics and has several years of university teaching experience. She has complemented her academic background with more than 25 years in the private sector, working with international firms as a Director of Digital Transformation Programs, as a startup entrepreneur, head of AI Practices, and most recently as General Manager of the Confiance IA consortium. Marie-Pierre will share her diverse experience in AI, the challenges she and her teams have faced in designing and operationalizing AI solutions, and why trustworthy AI is a critical lever for industries in adopting AI.

This conference is designed for business leaders and AI professionals who are curious to discover what practical steps they can take to boost their AI initiatives and best ensure the trust that drives the operationalization and adoption of AI solutions.
