

Conference : Women & AI: Amplifying Humanity, Transforming Organizations

Duration: 1 hour

Audience: Pour tous

Summary

What if the skills of the future were already within our reach? In a rapidly changing world, feminine approaches, marked by empathy, awareness, and collaboration, resonate strongly with the possibilities offered by artificial intelligence. This conference presents a bold vision: a future where women, strategically partnering with AI, become catalysts for transformation within their organizations and society at large.

Marie-Pier St-Hilaire, Harvard Business School graduate and visionary entrepreneur who initiated the “Numérique au Féminin” movement, shares her journey and deep conviction: when used wisely, AI can amplify human intelligence and accelerate the emergence of more conscious, inclusive, and sustainable leadership.

This conference is aimed at women, and men, who believe in the power of augmented humanity and wish to play an active role in shaping a future where technology serves awareness, cooperation, and sustainability.
